

A fresh new approach

Through the years, Conlog has constantly upgraded and invested in new technologies and equipment to ensure our products remain world class. For example, the company has one of the country's most advanced laboratories, which includes one of the first RF chambers; other new acquisitions include a 3D laser scanner and solid model printer.

More recently, the investment has been a lot more visible, as the company upgraded the headquarters building. Following some 18 months of noise, rubble and building site, the new building was unveiled during African Utility Week in February of this year, to enable our customers to share in this auspicious occasion.

Our old building, before we began with renovations

Our magnificent new building
